University of the Philippines Diliman

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{nn} \end{pmatrix}$$

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{nn} \end{pmatrix}$$

$$\Downarrow$$

$$L = \begin{pmatrix} l_{11} & 0 & \cdots & 0 \\ l_{21} & l_{22} & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ l_{n1} & a_{n2} & \cdots & l_{nn} \end{pmatrix}, U = \begin{pmatrix} u_{11} & u_{12} & \cdots & u_{1n} \\ 0 & u_{22} & \cdots & u_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & u_{nn} \end{pmatrix},$$

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{nn} \end{pmatrix}$$

$$\Downarrow$$

$$L = \begin{pmatrix} l_{11} & 0 & \cdots & 0 \\ l_{21} & l_{22} & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ l_{n1} & a_{n2} & \cdots & l_{nn} \end{pmatrix}, U = \begin{pmatrix} u_{11} & u_{12} & \cdots & u_{1n} \\ 0 & u_{22} & \cdots & u_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & u_{nn} \end{pmatrix},$$

$$P = \begin{pmatrix} p_{11} & p_{12} & \cdots & p_{1n} \\ p_{21} & p_{22} & \cdots & p_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ p_{n1} & p_{n2} & \cdots & p_{nn} \end{pmatrix}$$

- $PA = LU$

LU(P) Decomposition

- $PA = LU$
- Applicable to square matrices (mainly)

- $PA = LU$
- Applicable to square matrices (mainly)
  - Can be applied to general (i.e. m x n) matrices

- $PA = LU$
- Applicable to square matrices (mainly)
  - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I

LU(P) Decomposition

- $PA = LU$
- Applicable to square matrices (mainly)
    - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I
    - If A can be reduced to REF (i.e. to U) without interchanging any rows, then P = I

LU(P) Decomposition

- $PA = LU$
- Applicable to square matrices (mainly)
  - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I
  - If A can be reduced to REF (i.e. to U) without interchanging any rows, then P = I
- Mainly used to solve Ax = b

LU(P) Decomposition

- $PA = LU$
- Applicable to square matrices (mainly)
  - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I
  - If A can be reduced to REF (i.e. to U) without interchanging any rows, then P = I
- Mainly used to solve Ax = b

$$Ax = b \Rightarrow PAx = Pb \Rightarrow LUx = Pb$$

- $PA = LU$
- Applicable to square matrices (mainly)
  - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I
  - If A can be reduced to REF (i.e. to U) without interchanging any rows, then P = I
- Mainly used to solve Ax = b

$$Ax = b \Rightarrow PAx = Pb \Rightarrow LUx = Pb$$

  - Introduce alternative vector z, then solve Lz = Pb

LU(P) Decomposition

- $PA = LU$
- Applicable to square matrices (mainly)
    - Can be applied to general (i.e. m x n) matrices
- P is a rearrangement of the rows of I
    - If A can be reduced to REF (i.e. to U) without interchanging any rows, then P = I
- Mainly used to solve $Ax = b$

$$Ax = b \Rightarrow PAx = Pb \Rightarrow LUx = Pb$$

- Introduce alternative vector z, then solve $Lz = Pb$
- Once z is solved, solve $Ux = z$

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{mn} \end{pmatrix}$$

QR Decomposition

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{mn} \end{pmatrix}$$

$$\Downarrow$$

$$Q = \begin{pmatrix} q_{11} & q_{12} & \cdots & q_{1m} \\ q_{21} & q_{22} & \cdots & q_{2m} \\ \vdots & \vdots & \ddots & \vdots \\ q_{n1} & q_{n2} & \cdots & q_{mm} \end{pmatrix}, R = \begin{pmatrix} r_{11} & r_{12} & \cdots & r_{1n} \\ 0 & r_{22} & \cdots & r_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & r_{mn} \end{pmatrix},$$

- $A_{mxn} = Q_{mxm}R_{mxn}$

- $A_{mxn} = Q_{mxm}R_{mxn}$
- $Q^{-1} = Q^T$, i.e. Q is an orthogonal matrix

QR Decomposition

- $A_{mxn} = Q_{mxm}R_{mxn}$
- $Q^{-1} = Q^T$, i.e. Q is an orthogonal matrix
- Applicable to general matrices

- $A_{mxn} = Q_{mxm}R_{mxn}$
- $Q^{-1} = Q^T$, i.e. Q is an orthogonal matrix
- Applicable to general matrices
- Mainly used to solve Ax = b

QR Decomposition

- $A_{mxn} = Q_{mxm}R_{mxn}$
- $Q^{-1} = Q^T$, i.e. Q is an orthogonal matrix
- Applicable to general matrices
- Mainly used to solve Ax = b

$$Ax = b \Rightarrow QRx = b \Rightarrow Rx = Q^{-1}b \Rightarrow Rx = Q^T b$$

$$P^{-1}AP = D$$

$$P^{-1}AP = D \Rightarrow A = PDP^{-1}$$

$$P^{-1}AP = D \Rightarrow A = PDP^{-1}$$

- Also called eigendecomposition

$$P^{-1}AP = D \Rightarrow A = PDP^{-1}$$

- Also called eigendecomposition
- Applicable only to diagonalizable (square) matrices

$$P^{-1}AP = D \Rightarrow A = PDP^{-1}$$

- Also called eigendecomposition
- Applicable only to diagonalizable (square) matrices
- Can be used for analysis/solution of linear ordinary differential equations

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} \end{pmatrix}$$

Singular Value Decomposition

$$A = \begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} \end{pmatrix}$$

$$\Downarrow$$

$$U = \begin{pmatrix} u_{11} & u_{12} & \cdots & u_{1m} \\ u_{21} & u_{22} & \cdots & u_{2m} \\ \vdots & \vdots & \ddots & \vdots \\ u_{m1} & u_{m2} & \cdots & l_{mm} \end{pmatrix}, V = \begin{pmatrix} v_{11} & v_{12} & \cdots & v_{1n} \\ v_{21} & v_{22} & \cdots & v_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ v_{n1} & v_{n2} & \cdots & v_{nn} \end{pmatrix},$$

$$\Sigma = \begin{pmatrix} \sigma_{11} & 0 & \cdots & 0 & \cdots & 0 \\ 0 & \sigma_{22} & \cdots & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \vdots \\ 0 & 0 & \cdots & \sigma_{mm} & \cdots & 0 \end{pmatrix}$$

- $A_{mxn} = U_{mxm} \Sigma_{mxn} V_{nxn}^T$

- $A_{mxn} = U_{mxm} \Sigma_{mxn} V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.

- $A_{mxn} = U_{mxm}\Sigma_{mxn}V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.
  - $U^T U = I$

- $A_{mxn} = U_{mxm}\Sigma_{mxn}V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.
  - $U^T U = I$
- The (main) diagonal entries of Σ are composed of the square roots of the eigenvalues of AA^T (or $A^T A$)

- $A_{mxn} = U_{mxm}\Sigma_{mxn}V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.
  - $U^T U = I$
- The (main) diagonal entries of Σ are composed of the square roots of the eigenvalues of AA^T (or $A^T A$)
  - The entries are also called the singular values of A.

Singular Value Decomposition

- $A_{mxn} = U_{mxm}\Sigma_{mxn}V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.
  - $U^T U = I$
- The (main) diagonal entries of Σ are composed of the square roots of the eigenvalues of AA^T (or $A^T A$)
  - The entries are also called the singular values of A.
- The columns of V are composed of the eigenvectors of $A^T A$.

- $A_{mxn} = U_{mxm}\Sigma_{mxn}V_{nxn}^T$
- The columns of U are composed of the eigenvectors of AA^T.
  - $U^T U = I$
- The (main) diagonal entries of Σ are composed of the square roots of the eigenvalues of AA^T (or $A^T A$)
  - The entries are also called the singular values of A.
- The columns of V are composed of the eigenvectors of $A^T A$.
  - $V^T V = I$

Singular Value Decomposition
